Sequence derived from one plasmid subclone, base position 69516 69532.
                                                             NEXIGHEORING SEQUENCE, INFORMATION;
The clone sequenced to the right is AC087106. Actual s
clone is at base position 1 of RP11-113G13; actual end
position 187624 of RP11-113G13.
                                                                                                                                                                                                                             SOURCE LIMPORMATION:
The RECT-11 human BAC library was made from the blood of one male donor, as described by Oscogawa K. Roon, P. Y. Zhao, B. Trengen, E. Tateno, M. Catansses. J. J. and de Jong, P. J. (1999) Man improved approach for construction of bacterial artificial normations approach for construction of bacterial artificial obstained exhibst from libraries, desmonice $11.48. The cions may be obstained exhibst from Research Genocios, Inc., (http://www.resgen.com) or Fater de Jong
                                                                                                                                                                                                                                                                                                                                                                                                                        MAPPING IMPORMATION: Mapping information for this clone was provided by Dr. John D. Mapping information for this densition about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                all regions were double stranded, sequenced with an alternate chemistry, or cowered by high quality data (i.e., phred quality > 30), an altempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly west confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 On Nov 17, 2001 this sequence version replaced gi:16418232

MOTE: This is a "working draft" sequence. It currently commisses of 2 courties. The true order of the pieces is not known and their order in this sequence record is arbitrary, daps between the contists are represented as runs of M but the exact sizes of the gaps are unbrown. This record will be updated with the finished sequence as soon as it is available and the accession number will

3': RP11-14301 (UWGC:bc0262) AC025817

Sequence Quality Assessment:

estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero.

Quality levels above 40 are expected to have less than

1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the

General filst filst format but are available as part This entry has been annotated with sequence quality

of this entry's ASN.1 file.

all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., but quality = 30), an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone, and the assembly was continued by restriction digest. This sequence was finished as follows unless otherwise noted: Phred

밁 8

Sequence Validation:
This sequence has been validated by Multiple Complete Digest
fingerprinting Comparison of the experimentally derived digest
fragments with sequence-predicted fragments is given below.
The electronically-digested sequence consists of both insert and
vector, in order to accurately represent the entire circular BAC.
Small fragments below a variable cutoff (approximately 400-800 by
are not resolved in the fingerprint and hence do not appear
in the vable. There are no significant remaining discrepancies
between the operational and predicted values. Uniquely ordered
fragments esparated by dashed lines.

It currently
consists of 20 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown,
this record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      as soon as it is available and the accession number will be preserved.

    Methods of assessing an individual's predisposition to abnormal
     calcification conditions such as osteoporosis by detq. the genotype of a
    promoter for the bone sialoprotein gene, the matrix gla protein gene, the
    osteoponting gene or the osteoprotegerin gene individually or in any
    combination. Specific allelic variations for each promoter are described.

It was used in the methods of the invention, which involve the determination of the promoter sequence at polymorphisms in a number of genes controlling bone mineral density. These genes include sequences encoding the bone staloprotein, the matrix 41 protein (1801), osteoprotin (orbi) and (orbi) protein the protein sequence in this broad mass. Along with the other position is associated with a higher peak bone mass. Along with the other polymorphic sites, this variable sequence can be used to predict an individual's predisposition to osteoprocess and atherosciences. thus
                                                                                                                                          Novel therapsutic agent for prevention and treatment of calcified tumors and proliferative disorders such as esteosarcoma, multiple myeloma and breast cancer, comprises bone sialoprotein promoter

c mammalian teletes to a novel gene therapy composition comprising a mammalian home saidoprotein (msp) promoter operably linked to a gene casespence encoding a toxic and/or therapeutic protein contained within a conditional content of the promoter directs gene expression in tissue and tumour cells with containing the content operable. It is active in fully-differentiated osteoblasts in home, in trophoblastic cells of the placenta, and in cementum and continue the test. It is also active in a viriety of human tumours or menisjonant growths which exhibit the sability to catching either in the menisjonant growths which exhibit the sability to catching either in the menisjonant growths which exhibit the sability to catching either in the majorant operation of the invention may be used to treat operation. It is also active in the promoter may also be expressed in non-malignant conditions in which calcification occurs, such as being composition of the invention may be used to treat oscentrally a protest may also be expression of a gene emoding a protein such as the property and expression of a gene genocing a protein such as provided the protein control of the protein control protein such as a composition of a gene genocing a protein such as a composition of a gene conding a protein such as a composition of a gene conding a therapeut to separate to protein such as a control of gene of the protein such as a control of gene to the such as a colony standard protein such as a such as a such as a colony standard protein such as a such as a such as a colony standard protein such as a colony standard protein such as a suc

The sequences can be used in the disaprosis and treatment of immune system disorders, including eye diseases such as retinopathy, monovareallar glancoma and macular degeneration, arteriosclerosis, anaemis, cancer, acute myeloid lunkeemis, Alzheimer's disease, Albs, getlepsy, neurofibroscosis, retemanced arthritis, psoriasis and inflammacocy/ilocrative bowel resources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        01ek

rejection

RESOULT PARTY NEW PARTY NE The invention relates to a composition comprising a human GDP-manuset 4,6-dailydratas (GM, GD) peptide. The peptide is useful for reducifying GM4, GD inhibitors, GM4, GD inhibitors are useful for reducing inflammation in a mammalian subject and for treating or ampliorating diseases affected by the level of cellular fucosylation or diseases affected by the fucosylation graphylation (glycoconjugates. These diseases include architects. transplant rejection, asthma, sepsis, repertusion injury, stroke or infection. The GM4, ED peptide or a polymentectide encoding it is also useful for manufacturing complex carbobytrates and as targets for screening small nodecule antagoniers of the activity of the anaryme. The

                                                                                                                 This sequence encodes a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The bb polypeptides can be used in vaccines for cliciting protective antibodies to members of the Borrelia genus, particularly for the use against Lyme discusse in immans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also be used for detection of members of the Borrelia genus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polymucleotide is useful in developing an assay for defects in the suryme, as well as in gene replacement therapy, Sequences and ARXI7942-ARXI7944 and ARXI7947-ARXI3716 represent DNA molecules encoding human GM4,60 peptides of the invention.

Once The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USFTO at sequence you've sequence-halm.

REAL EXECUSION OF THE PARTY OF WPI; 1999-189980/16. P-PSDB; AAY19932.

New isolated Borrelia burgdorferi nucleic acids - un products for the diagnosis, prevention and treatment caused by Borrelia, particularly Lyme disease used to develop ment of diseases

Claim 1; Page 124; 275pp; English.

This sequence encodes a Borrelia hungdorferi (Bb) protein of the invention, which is suitable for use in a waction. The Rp Daybeptides can be used in vactimes for eliciting protective antibodies to members of the Borrelia genus, particularly for the use against lyme disease in humans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also be used for detection of members of the Borrelia genus.

These can be used in the diagnosis, treatment and prevention of digestive system disorders; including cancer, Meckel's ediverticulum, bacterially sparsative infections, appendiatis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a general DNA fragment encoding a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human liver associated genomic DNA #151.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                04-DEC-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAS31977

Sequences A831827-A832182 represent genomic DNA molecules, which encode the liver associated polypoptides of the invention. Liver associated polypoptides and their associated polymolecules are useful in the diagnosis, treatment and prevention of various types of discorders in e.g. humans, nice, rabbits, goats, lorses, cats, dogs, chickens or sheep. A puthological condition can be determined by detecting the presence absence of a mutation in a liver associated polymolecules. The treatable
                                                                                                 Claim
                                                                                                                      Isolated nucleic acid molecule encoding a human liver related protein is used in preventing, treating or ameliorating disorders of the liver particularly cancer of the liver
                                                                                                                                                                                                Rosen

WPI; 2001-565190/63

Nucleic acid encoding novel connective tissue associated polypeptides, used in diagnosing, preventing, treating or ameliorating a disorder such as cancer or Theumatoid arthritis -

Disclosure; SEQ ID No 2001; 673pp; English

The present invention relates to the isolation of novel human connective tissue related polyheptides (ANDS/613-ANDS/621) and the polyhenchectide (CDNA and genomic) sequences encoding them. The sequences of the invention are setfil in the diagnosis. Treatment, prevention and/or prognosis of diseases associated with connective tissue(s) including cancer. The polyhenchectide sequences of the invention are also useful in gene therapy. ANS/4116 typesent genomic sequences encoding the novel human connective tissue related polypeptides. Secuence are printed specification, but was obtained in electronic format directly from MIPO at the property of the printed specification, but was obtained in electronic format directly from MIPO at they have just publy published port. sequences.

Query Match Best Local : The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the disgnosis and treatment of immune system disorders, including eye diseases under a retinopathy, neovescular glaucoma and macular degeneration, arteriosclerosis, maemia, cancer, acute myeloid leukaemia, Alleiner's disease, AIDS, spliepsy, henvofibroatenistics, returnancial arthritis, peoriasis and inflammatory/plecrative bowel intemmental arthritis, peoriasis and inflammatory/plecrative bowel Sequence 13377 BP; 3714 A; 146 C; 2702 G; 69.7%; 85.7%; Score 21.6; Pred. No. 1 6815 T; 0 other; Length 13377;

Products desirved from Bb can be used for the descrition, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biopynthetic products, e.g. enzymes, Borrelia belongs to a family of motile, spiral-shaped batteria called Spirothetes spiral-shaped and borrelia causes epidemic and spiral-shaped batteria causes epidemic and

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
